■ "Robust Estimation of Skewness and Kurtosis in Distributions with Infinite Higher Moments"

MATTEO BONATO, Credit Suisse

Email: matteobonato@gmail.com

This paper studies the behavior of the conventional measures of skewness and kurtosis when the data generator process is a distribution which does not possess variance or third or fourth moment and assesses the robustness of the alternative measures for these particular cases. I first show that for symmetric fat tailed distribution skewness is far from being a valid indicator of the presence of asymmetry. Secondly, I study, via Monte Carlo simulations, the behavior of the alternative measures of skewness and kurtosis when applied to distributions that do not possess finite higher moments. Finally, I present an application to the series of daily returns on a large cap US stock and show why alternative measures are a better tool to describe the distribution of financial returns.

■ "On the Optimality of Multivariate S-Estimators"

CentER Discussion Paper Series No. 2010-39

CHRISTOPHE CROUX, Catholic University of Leuven (KUL) - Faculty of Business and Economics (FBE)

Email: christopher.croux@econ.kuleuven.be

CATHERINE DEHON, Université Libre de Bruxelles (ULB), Université Libre de Bruxelles (ULB) - European Center for Advanced Research in Economics and Statistics (ECARES), Université Libre de Bruxelles (ULB) - Solvay Brussels School of Economics and Management

Email: cdehon@ulb.ac.be

ABDELILAH YADINE, Université Libre de Bruxelles (ULB)

Email: Abdelilah.Yadine@ulb.ac.be

In this paper we maximize the efficiency of a multivariate S-estimator under a constraint on the breakdown point. In the linear regression model, it is known that the highest possible efficiency of a maximum breakdown S-estimator is bounded above by 33% for Gaussian errors. We prove the surprising result that in dimensions larger than one, the efficiency of a maximum breakdown S-estimator of location and scatter can get arbitrarily close to 100%, by an appropriate selection of the loss function.

■ "The Time Fractals"

MUKUL PAL, Orpheus Capitals
 Email: mukul@orpheus.asia

Ralph N. Elliott wrote the wave principle in 1938. In 1975 Benoit B. Mandelbrot coined the term fractal and in 1982 published his ideas in "The Fractal Geometry of Nature." The book brought fractals into the mainstream of professional and popular mathematics. In February 1999, Benoit Mandelbrot submitted an article to Scientific American called "A Multifractal Walk down Wall Street." In the article, he discussed how fractal geometry can be used to model the stock market curves. The enclosed research reworks the Mandelbrot Multifractal from a time cycle rather than trend perspective to prove that time fractal is more proportionate than the price fractal and is the real law of nature, which drives everything in nature. The case is validated by illustrating power law curves in time cycle periodicities. Power law is seen across nature and in diverse social trends. The power law in prices is a subject of extended study, but there has been no research attempt made to prove power law in time cycle periodicities. Testing cycle periodicity needs large historical data. Long term time series are difficult to obtain and many emerging markets have seen stock market trading activity only start a decade back. The continued prosperity after 1980's was a reason why time fractals did not get researchers attention, unlike price fractal which was actively studied and researched. The fact that what we can see is what we can relate too more also made researchers focus more on price than time, which is less visible. Cycles are not conventionally believed to be patterns. Patterns are understood either conventionally or as Elliott wave fractals. Even few Elliott wave practitioners have admitted the limitation of the Elliott Wave structure as being more sharp on form than on time. These were few reasons why time fractals remained unproven. This study further connects its findings with the existing research on various economic cycles finally extending the proof to a long - short intermarket strategy on an asset pair.

Solicitation of Abstracts

This eJournal distributes working and accepted paper abstracts focused on the use of different mathematical methods applied to econometrics. The topics in this eJournal include the subjects in Section C6 of the JEL Classification System. Optimization Techniques; Programming Models; Dynamic Analysis - methods and techniques used to find the action that optimizes the value of an objective function (optimization and programming); and methods that apply extensions of static analysis (dynamic analysis); Existence and Stability Conditions of Equilibrium - the analysis of conditions required for equilibrium of economic variables to exist and to be stable; Computational Techniques - discussion and analysis of different computational techniques that might be of interest to econometricians and economists. Input-Output Models - models that consider inter-industry relations in an economy, depicting how the output of one industry goes to another industry where it serves as an input, and thereby makes one industry dependent on another both as customer of output and as supplier of inputs; Computable General Equilibrium Models - a class of economic models that use actual economic data to estimate how an economy might react to change in policy, technology or other external factors; Non-Equilibrium/Disequilibrium Models - a class of economic models that study non-equilibrium of disequilibrium states of economic variables; Econophysics - models that apply physical principles to economics; Other - any other topic related to Mathematical Methods & Programming and not falling under any of the other categories listed above.

To submit your research to SSRN, log in to the [SSRN User Headquarters](#), and click on the My Papers link on the left menu, and then click on Start New Submission at the top of the page.

Distribution Services

If your organization is interested in increasing readership for its research by starting a Research Paper Series, or sponsoring a Subject Matter eJournal, please email: RPS@SSRN.com

Subscription Management

You can change your journal subscriptions by logging into [SSRN User HQ](#). If you have questions or problems with this process, please email UserSupport@SSRN.com or call 877-SSRNHelp (877.777.6435 or 585.442.8170). Outside of the United States, call 00+1+585+4428170.

Site License Membership

Many university departments and other institutions have purchased site licenses covering all of the journals in a particular network. If you want to subscribe to any of the SSRN journals, you may be able to do so without charge by first checking to see if your institution currently has a site license.

To do this please click on any of the following URLs. Instructions for joining the site are included on these pages.

Accounting Research Network
Cognitive Science Network
Corporate Governance Network
Economics Research Network
Entrepreneurship Research & Policy Network
Financial Economics Network
Health Economics Network
Information Systems & eBusiness Network
Legal Scholarship Network
Management Research Network
Political Science Network
Social Insurance Research Network
HRN Classics Research Network
HRN English & American Literature Research Network
HRN Philosophy Research Network

If your institution or department is not listed as a site, we would be happy to work with you to set one up. Please contact site@ssrn.com for more information.

Individual Membership (for those not covered by a site license)

Join a site license, request a trial subscription, or purchase a subscription within the SSRN User Headquarters: <http://www.ssrn.com/subscribe>

Financial Hardship

If you are undergoing financial hardship and believe you cannot pay for a journal, please send a detailed explanation to Subscribe@SSRN.com

[^top](#)

To ensure delivery of this journal, please add **ERN@publish.ssrn.com (Economics Research Network)** to your email contact list. If you are missing an issue or are having any problems with your subscription, please Email usersupport@ssrn.com or call 877-SSRNHELP (877.777.6435 or 585.442.8170).

FORWARDING & REDISTRIBUTION

Subscriptions to the journal are for single users. You may forward a particular eJournal issue, or an excerpt from an issue, to an individual or individuals who might be interested in it. It is a violation of copyright to redistribute this eJournal on a recurring basis to another person or persons, without the permission of Social Science Electronic Publishing, Inc. For information about individual subscriptions and site licenses, please contact us at Site@SSRN.com
